TELCORP

Americas Telecom Wholesale Services

TELCORP

Telcorp provides high-quality data WAN services throughout the Americas and the Caribbean.

Telcorp helps its customers to plan and implement their telecommunications projects. We cordinate resourses, integrate suppliers and manage projects so they meet performance, time and cost goals. Telcorp is commited to delivering effective solutions that enable our clients to focus on their business functions by creating the underlying communication support for their applications. We have a deep knowledge of the global telecommunications market, especially in challenging regions such as Mexico, Central America, the Caribbean and South America.

We understand that finding a seamless International connectivity solution is a challenge for most companies. Telcorp takes care of managing the relationship with multiple providers, negotiating service levels and costs that will enable connectivity for all your remote offices. We have the flexibility of choosing the technology that is the best fit for each client.
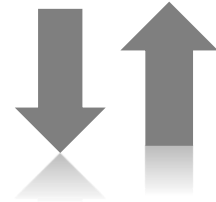

Systems Integration is what we do best, enabling people, business processes and applications to work together based on a reliable communications infrastructure.

Integrated Telecommunications Solutions

TELCORP Services

International Private Lease Line

International Private <u>Leased</u> Circuit (IPLC) / <u>Private Line services</u> allow you to establish dedicated, permanent, point-to-point connections between your branch's locations. Private line circuits are highly reliable, inherently secure and protocol independent connections that can be used by our customers to transport voice, data or video without restrictions.

Applications

Examples of different <u>applications</u> that network global providers can use to complement its service portfolio:

• Highly secure private lines for financial institutions, government and non-governmental organizations.
• Low bandwidth transactional secured enterprise <u>applications</u>
• High capacity bandwidth private lines for International ISPs.
• Corporate <u>applications</u> that require high performance for <u>private cloud</u> access, voice and video over IP applications, ERP applications, etc.
• Diverse international links implemented for failover and load balance solutions.
•   Telcorp service includes a service level agreement that guarantees availability, latency and bit error rate (BER) metrics as well as mean time to repair (MTTR).

High Performance Connections

TELCORP Services

Satellite Internet

Premium Satellite Internet from Telcorp, delivers high-speed, low-latency, <u>net</u>-neutral, application tolerant, VPN optimized, highly predictable connections... which are just some of the reasons so many professionals and organizations upgrade their satellite services with us.

Features

•Telcorp uses iDirect's frequency hopping technology we call "dynamic contention", that creates a far larger spectrum of service from which to share.

•Our Network Is Fully Open and Net-Neutral - meaning we do not block certain kinds of traffic such as VPN, VOIP, and other applications that use various ports or destinations... ports and destinations that are often locked down other providers, especially consumer providers.

•Our Network Is Multi-User Friendly - for simultaneous connections from multiple computers. We expect the traffic and want you to deliver high-speed connectivity to your entire team.

•Grow With Telcorp. There is no need to upgrade equipment purchase from Ground Control if you wish to upgrade your services with us. All equipment we sell is designed for maximum compatibility with our maximum speed services, as well as the many add-on services we offer, such as VoIP phone, VPN, and dedicated channels.

•We Install and Service Everywhere. With operational services in more than 45 countries, Telcorp provides particular experience in the fragmented regions of Latin America and the Caribbean

•Quick installation time.

•Support is 24 x 7 and Staffed With Experts

Endless Conection

TELCORP

Dedicated Access

Telcorp offers Dedicated Internet Access (DIA) solutions ranging from corporate Internet access to wholesale transit ports to serve our customer's requirements. The service offers the right balance of domestic and international connectivity so that your customers can run their global applications while maintaining fast access to local content. For cloud and content delivery applications we offer flexible solutions with direct connectivity to specific local, regional and national IP networks in the Latin American and the Caribbean regions that can help you improve our customer experience.

Internet Access in The Americas

By utilizing Telcorp's own network infrastructure as well as integrating carefully selected local, regional, national ISPs, establishing transit and peering agreements, Telcorp provides a flexible combination of local and international visibility for you and your customers.

Coverage extends to more than 45 countries in Latin America, the Caribbean and North America with a profound expertise in regional and hard to reach locations including rural and industrial areas, distribution plants, technology parks, free-trade zones, airports as well as metropolitan and suburban areas.
